Oct 2025 ▾

Real-time activity detection on a Raspberry Pi 5.

Jun 2025 – Jul 2025 ▼

Heart disease risk model deployed to AWS and Azure.

Jan 2025 – Mar 2025

Voice-driven task manager with Gemini recommendations.

Apr 2025 ▼

AI quiz generator built at a 24-hour hackathon.

Apr 2025 ▼

PHP and SQL gym management app.

Feb 2025 ▼

Linux shell in C with I/O redirection and signal handling.

Dec 2024 ▼

Snake and Tetris prototypes on raylib.

Behavior notes

All pages

- Every hover color change (nav items, Back, footer icons, project titles, Download PDF) uses a diagonal wash: green #1C653A sweeps over Base #171717 at a 135° angle, top-left to bottom-right, instead of a plain fade. Unhover reverses the sweep. Planned build: 135° linear gradient with a hard color stop, oversized background, background-position transition (~300ms ease-out). Text and Download PDF fill use background-clip or background; footer icons use a CSS mask. Reduced motion: plain color change. Not shown in the wireframe.
- Keyboard focus shows a 2px green ring.
- Header is sticky at the top; footer icons are sticky at the bottom.
- Footer icons (LinkedIn, email via mailto, GitHub) turn green on hover.
- Font: Newsreader serif with Georgia fallback.

Experience

- The whole page scrolls; header and footer stay in place. No inner scroll box.
- Back links to home, not browser history, and turns green on hover.
- Entries are ordered newest first.

Resume

- The PDF is embedded in the page.
- Download PDF: black fill fades to green on hover.
- Back button uses the same hover as other pages.

Mobile

- Same layout, scaled down.
- Touch has no hover, so tapped items use the same green.
- On Experience, dates and location stack under the title.

Home

- 安 sits top-left in green and links home.
- Nav: Home, Experience, Projects, Resume, About.
- Each nav item turns green on hover.

Projects

- Hover: title and chevron turn green.
- Hover uses the same wash animation as all pages.
- Click expands the project in place. There is no detail page.
- Only one project is open at a time; opening another closes the previous one.
- All projects share one layout. There is no More projects section.
- The image slot appears only when the project has a visual.
- The wireframe shows FracFeedExtractor open as the example.

About

- Content not decided yet. Wireframe shows placeholder paragraphs in the same panel style as Experience.
- Same sticky header, Back button and footer as other pages.
