EDUCATION

Oregon State University

B.S. in Computer Science - Data Science; Minor in Statistics

Corvallis, OR

June 2027

- GPA: 3.62
- Relevant Coursework: Machine Learning, Data Science, Artificial Intelligence, Analysis of Algorithms, Software Engineering II, Operating Systems I, Database Management Systems, Computer Networks

EXPERIENCE

IT Technician

June 2026 – Present

Oregon State University

Corvallis, OR

- Serve as first-line (Tier 1) support across phone, email, and the support portal, triaging and resolving requests in ServiceNow with clear, reproducible ticket documentation for clean escalation and knowledge transfer.
- Troubleshoot a broad range of issues spanning networking, login, hardware, and software, performing root-cause analysis to drive first-contact resolution and minimize end-user downtime.
- Administer Active Directory by provisioning and deprovisioning user accounts, resetting passwords, unlocking accounts, managing security groups and access permissions, and joining and managing devices on the domain.

PROJECTS

FracFeedExtractor | *Python, XGBoost, scikit-learn, NLP, Ollama*

Sep. 2025 – June 2026

- Architected a modular, end-to-end Python pipeline as a four-person OSU senior capstone that ingests research PDFs and outputs a structured, analysis-ready database of predator feeding-rate data.
- Trained a TF-IDF + XGBoost classifier with stratified cross-validation, reaching 94% accuracy with balanced precision/recall on a 234-paper held-out test set.
- Engineered schema-constrained extraction with Pydantic and a locally run LLM (Ollama), backed by pytest, coverage, and GitHub Actions CI for reliable, reproducible outputs.

DubBetter Ring | *Python, TensorFlow Lite, Raspberry Pi 5, Computer Vision*

October 2025

- Deployed a TensorFlow Lite computer vision model on a Raspberry Pi 5 for on-device real-time activity classification, achieving 70% live detection accuracy.
- Built a Socket.IO WebSocket server for bidirectional video-stream multiplexing with a React/Vite frontend for live streaming and monitoring.
- Prototyped and delivered the functional AI system with teammates within a 24-hour hackathon.

Heart Disease Predictor | *Python, scikit-learn, Docker, AWS, Azure*

June 2025 – July 2025

- Built a scikit-learn pipeline predicting heart disease risk, reaching 80% accuracy with recall optimized to 70%.
- Containerized with Docker and deployed to AWS (EC2, ECR, Elastic Beanstalk) and Azure via CI/CD.

TalkTask | *JavaScript, React, Node.js, Express, MongoDB, REST APIs*

Jan. 2025 – March 2025

- Collaborated with a team of six to build a full-stack voice-driven task manager, contributing Node.js and Express RESTful APIs for CRUD operations and user authentication.
- Integrated MongoDB for persistent data storage with Axios-based client-server communication and implemented speech-to-text task entry via the Web Speech API.
- Integrated Google Gemini API to power personalized task recommendations, connecting live LLM inference to end-user product features.

TECHNICAL SKILLS

Languages: Python, JavaScript, C, C++, SQL, PHP, R, HTML/CSS, Bash

Machine Learning & Data: scikit-learn, XGBoost, TensorFlow Lite, pandas, NumPy, Ollama, Gemini API

Web & Frameworks: React, Node.js, Express, Tailwind CSS, Socket.IO, REST APIs

Developer Tools: AWS, Azure, Docker, Git, GitHub Actions, Linux, pytest, Jest, Jira

Databases: MySQL, PostgreSQL, MongoDB, Supabase

IT & Support: ServiceNow, Duo MFA, Microsoft Office 365, Google Workspace, Windows, macOS
